Personal & Team Projects

Due to my education in collage I worked on a few side projects to improve my knowledge and understanding different parts of my fields. Below are the projects I've finished so far:

Build a application client-server android based

- The project was technically developing a nice user experience interaction with the high cross-browser capability and quite challenging. Also implemented with framework flutter, firebase for the Javascript library and NodeJs.

Build a application client-server website based

- This project technically aims to build a waste data management system in a waste bank. Also implemented with laravel, firebase, HTML, and blade frameworks.

Build a application website based for a hotel

- This project technically aims to build a hotel management system and online booking. Also implemented with laravel, MYSQL, HTML, and blade frameworks.
